

# MASTER-TROL®

## WATER MANAGEMENT SYSTEM

**Have you lost control?  
 Are you tired of inmates wasting water and flooding your facility?**

**Take Back Control of Your Plumbing System with Master-Trol®**

**What is Master-Trol®?** Master-Trol® is an intelligent water management system that has provided facilities throughout the world with the tools to regain control of their plumbing systems.

Master-Trol® utilizes an electronic flush valve, lavatory or shower valve to effectively manage and control water flow- allowing precise control of your water supply at the fixture. Do you need to limit the usage of water? Want to change the run time of a valve? Need to remotely turn the water off? Master-Trol® allows complete control of the water supply to the fixture.

Master-Trol® allows for the valves to be managed remotely by an electronic controller. The Master-Trol® controller features advance microprocessor technology and incorporates digital programming- a blend which ensures control and reliability. The controllers can be installed as a standalone configuration or as a communicating configuration- allowing for maximum flexibility for any application.

**Where is it used?** Master-Trol® offers products and systems that provide control for all types of facilities - from prisons and government buildings to educational facilities and sports arenas.

Both new and existing facilities can benefit from Master-Trol®. Facilities can increase control and security, while reducing water usage by installing Master-Trol®.

### CONTROL

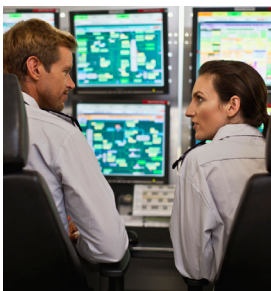

Master-Trol® allows remote control of all aspects of water usage including the ability to set valve timing, apply valve lockouts, and enable/disable valves.

### SECURITY

- Reduce close interaction between staff and inmates in correctional settings through remote control.
- Reduce inmate flooding by limiting water usage with lockouts and valve timing.
- Reduce the ability of inmates to hide contraband during shakedowns by shutting down the water system in seconds.

### WATER SAVINGS

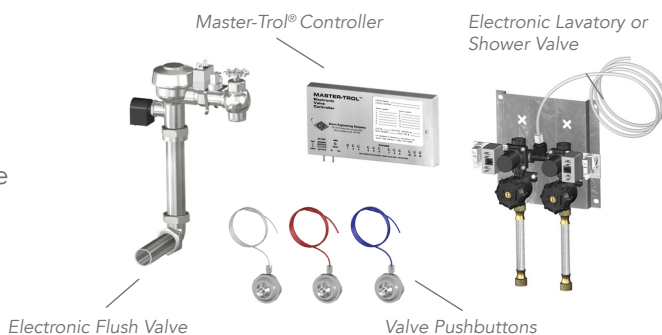

Water usage can be greatly reduced by using standard valve settings. In some cases, facilities have seen up to a 68% reduction in water usage!

# TAKE CONTROL WITH MASTER-TROL®

## Valve Settings

- Adjustable valve runtimes
- Adjustable valve lockout times
- Ability to enable/disable single or multiple valves
- Multiple valve options to tailor the function of the valve to the type of fixture it services
- Remote operation allows facility to activate a valve with the click of a button

## Standalone Configuration

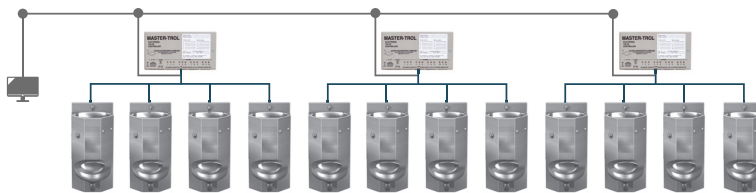

The Master-Trol® controllers can be installed in a standalone configuration, where the controllers operate independently with factory programmed settings supplied by the facility.

Standalone Configuration

## Communicating Configuration

The controllers can be installed in a communicating configuration, where the controllers are linked together to a remote interface device such as a desktop computer, a laptop, or a handheld programmer; allowing you to centralize control.

Communicating Configuration
