Grab Bars - ADA Compliant

Grab Bars are designed to meet the needs of the disabled. Grab bars are constructed of 1-1/2" outer diameter type 304 stainless steel tubing with exposed surfaces polished to a satin finish and include 3" diameter wall flanges countersunk for furnished 2" long stainless steel vandal-resistant screws. Grab bars meet or exceed ANSI, UFAS and ADA requirements for structural strength and have a 1-1/2" space between the grab bar and the mounting surface. Selection of appropriate length, configuration, adequate wall backing and installation dependent on application will determine compliance for accessibility. Consult applicable codes for complete requirements. Compliance is subject to the interpretation and requirements of the local code authority. Grab bars are not recommended for installation in areas of high security.
