

Option -FVO

Flush Valve Opposite -

This option is for use on combination fixtures to locate the flush valve pushbutton opposite its standard location. For example, the standard flush valve pushbutton location for -CT, -RO and -AR units is on the right hand side of the backsplash. When specified, the pushbutton will be located on the left hand side (-AL and -LO units are opposite). In most cases, this is intended to prevent interference in the chase area with other devices.

Please visit www.acorneng.com for most current specifications.
