

Option -MVCFTE

Modular Electronic Valve, Time-Trol Flood-Trol

Provides an Acorn Time-Trol System for limiting frequency of flush valve operation with an anti-flood system prevents toilet water overflow by shutting off the water supply from the flush valve. Controller includes 10 preset lockout intervals ranging from 1 second to 9 minutes easily adjustable with a dial selector knob. The pushbutton is vandal-resistant and requires less than 5 pounds to activate valve. MVC controller can be remotely located up to 100 feet from the fixture.
